**Rules of collaboration (use as much space as you need)**

| How do you handle… | How do you choose to do this? | Consequences when not followed? |
|---|---|---|
| Meetings, such as:<br>● booking<br>● formalities (how, when, meeting structure, …)<br>● presence<br>● late arrival<br>● … | Hold at least one weekly meeting in person, besides regular meeting with overseer.<br><br>Meeting dates and times for the following week are decided at the final meeting for the current week ( most likely friday's overseer meeting ). This is done using the common calendar. This is then entered into the group calendar.<br><br>Everyone is expected to arrive within 15 minutes of the meeting time unless otherwise specified.<br><br>A meeting can have an agenda of which the secretary is responsible for. If a meeting does not have an agenda it is seen as a work focused meeting but a secretary should still be assigned to take notes of discussions and decisions taken.<br><br>Rotate the meeting secretary each week. Decide on the next week's secretary on the last meeting of the week. | Bring fika to subsequent meeting. |
| Division of labor, such as:<br>● responsibilities (good to formulate with explicit goals and expectations)<br>● assigning tasks to ensure everyone can contribute<br>● deadlines | The meeting secretary is responsible for taking notes. They are also responsible for the agenda for the current meeting.<br><br>Task assignment is decided within the group, through discussion.<br><br>Weekly deadlines (non strict). If you work on a task, describe your progress. And what should be done next week. | |

# Group Contract - Team Oh-One

| | | |
|---|---|---|
| • … | Tasks and deadlines are determined at the beginning of the week, in reference to what was done last week.<br><br>At the end of the week, a short group reflection is held to determine what has been done according to the deadline and what needs to be continued or expanded on next week.<br><br>We use a kanban board to organize task progress implemented in our GitHub repository. | |
| Decisions, such as:<br>● when do you use e.g. consensus or majority decisions, lottery, etc<br>● documenting decisions<br>● how will differing opinions be resolved?<br>• … | A larger decision has to be unanimous. Such as general design decisions. Specific code related decisions can be made individually but we require review of Pull Requests.<br><br>Decisions should be documented by the current secretary.<br><br>Differing opinions should be resolved through discussion, and in general compromises are encouraged and expected. If a decision is split evenly in opinions, ask TA for advice. | |
| Time log and diary, such as:<br>● how, who, when?<br>● what?<br>● praise and criticism<br>● violations of this contract?<br>● course demands?<br>● how much time are you expected to work on the project each week?<br>● … | Each person is responsible for keeping track of the work they have done. This is called their weekly work report.<br><br>The secretary is responsible for the group's weekly work report.<br><br>General praise through Discord and Pull Requests is appreciated.<br><br>No certain minimum time is expected of any individual member. The group in general gives a direction of the amount of effort required each week. | |

# Group Contract - Team Oh-One

| | | |
|---|---|---|
| Communication, such as:<br>● how?<br>● expectations regarding responses and response times?<br>● how do you work with feedback (about the project, the process, individual achievements)<br>● … | Two communication methods: Discord and Github. Discord will be the primary communication method, with a server to discuss ideas, plan meetings as well as logging changes and completed tasks.<br><br>Github is used to keep track of current tasks, as well as discuss code and code changes. This is done mainly through the kanban board, GitHub Issues and Pull Requests. | |

# Group Contract - Team Oh-One

**Handling of documents and files**

| | | |
|---|---|---|
| • how, who?<br>• version control?<br>• … | All final meeting notes are placed in the main GitHub repository. Individual week work reports are not shared between members and can be stored however the individual likes.<br><br>VC: GitHub + git<br>Commits: short describing text of the code submitted<br>Contribution: branch made for each issue, then pull-requested and merged after approving review from another team member. | |

**Ambition**

Formulate in a few sentences what your mutual goal with the project is.

| |
|---|
| Make an awesome game. Learn a lot. Get good grade :) |
